

Black Rock Forest

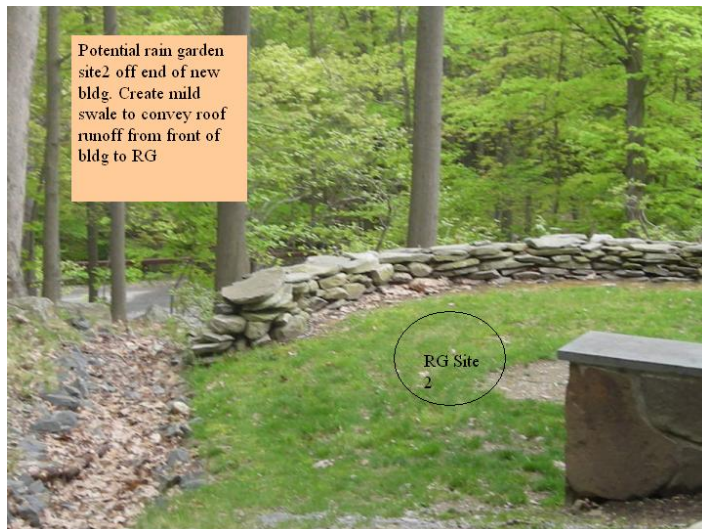

Cornwall, New York

Before Construction

edging from bldg, remove stone, shape shallow depression, replace stone (with fabric under), plant specimen plantings with roof drip in mind

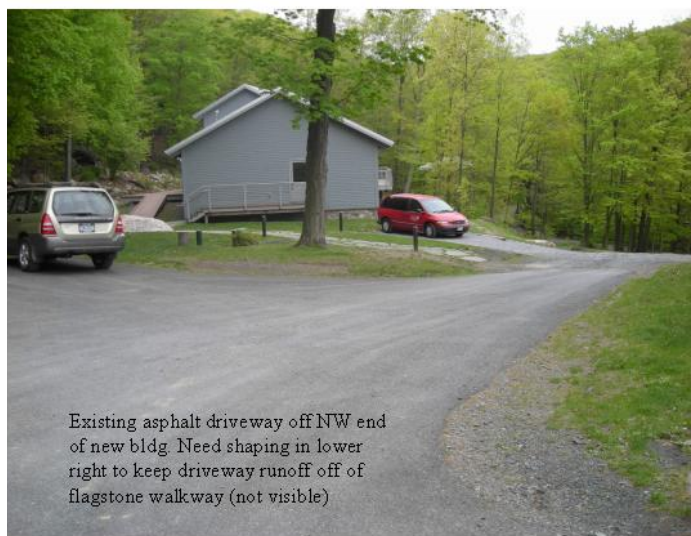

Potential rain garden site 2 off end of new bldg. Create mild swale to convey roof runoff from front of bldg to RG

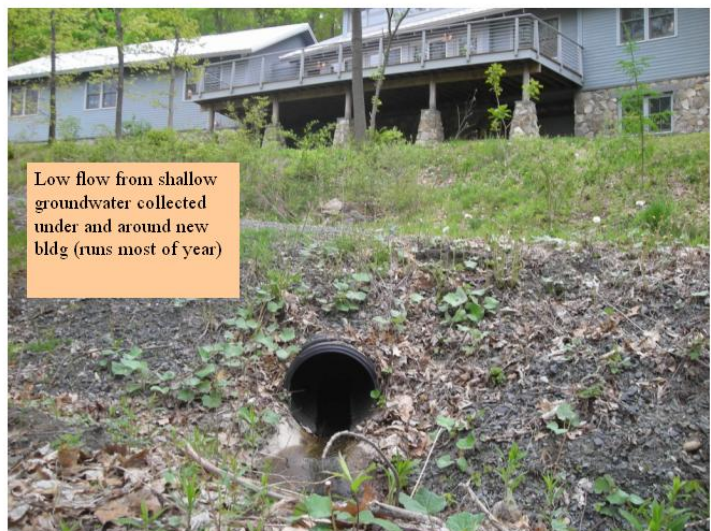

Another view of RG2 potential site. Roof runoff from front of new bldg originates in lower left

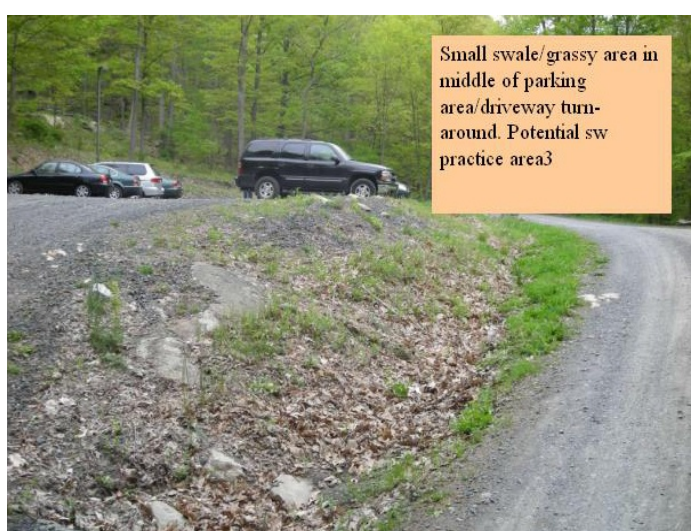

Existing asphalt driveway off NW end of new bldg. Need shaping in lower right to keep driveway runoff off of flagstone walkway (not visible)

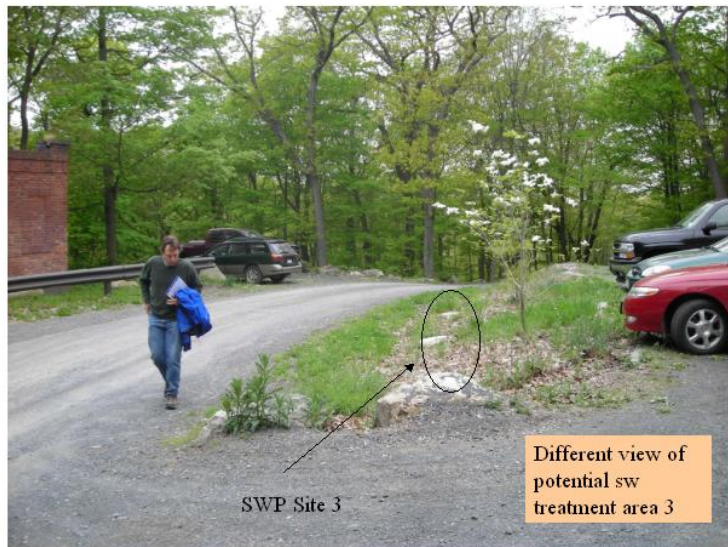

Low flow from shallow groundwater collected under and around new bldg (runs most of year)

Small swale/grassy area in middle of parking area/driveway turnaround. Potential sw practice area 3

During Construction

Completed Rain Garden One Year Later
